# Basic Installation Instructions

**NOTE:** Before installation, turn off water supplies to existing faucet and remove faucet if replacing an existing device. Clean the faucet basin and clear away debris. Flush all supply lines before connecting the faucet. Failure to do so may result in debris clogging the inlets and/or internal control and mixing valve.

1. Carefully screw aerator into spout. Use tool, if supplied with, aerator.

2A. Install faucet to sink using provided mounting hardware.

2B. (For faucets with optional cover plate). Align gasket with faucet bottom and press firmly together. Pass shank through cover plate and fasten to the faucet with the provided screws.

3. Ensure that sink is clear of tools/debris and is in normal operating condition.

4. Connect the faucet to hot & cold supply and then turn water supply on to check for leaks and proper functions.
